## **Innovative New Switch Panel Makes Mounting Rocker Switches Easy On the Jeep Wrangler TJ**

Phoenix, AZ – The Jeep Wrangler TJ remains one of the most popular off-road platforms ever, but anyone with a TJ knows that mounting switches for electrical accessories is difficult. Daystar Products now offers an innovative new switch panel that provides a clean and easy way to install one or two switches to the TJ dash.

Using the same outside-the-box thinking behind several other unique Daystar products, the new Daystar switch panel replaces one of the factory air conditioning vents on the dash. Designed using the latest computer-modeling software, the switch panel simply pops into place once the factory vent is removed. It includes louvers that match the shape of the stock air vents, so there is little airflow restriction and the switch panel appears to be factory once installed. It is pre-scored on the back to accept one or two rocker switches, which are available separately.

Daystar's switch panel can replace either of the two HVAC vents on the center of the dash, both of which are readily accessible to the driver or passenger. This versatility allows the user to configure the switch mount to suit individual needs and uses. Installation is simple and requires only a screwdriver, and the dash can be easily returned to stock if needed.

Daystar also offers high-quality 20-amp single-pole rocker switches that are illuminated in one of four colors: red, amber, green, or blue. Switches are sold separately.

Combine the new switch panel with Daystar's unique upper dash panel to create a customized interior in minutes! Daystar also offers dash and switch panels for the Jeep Wrangler JK as well as a variety of suspension lifts, bushing kits, body lifts, and other accessories for Jeeps from 1941-present.
